

Clinton Garwood

Learning Specialist, Course Developer, Instructor

Some instructional resources I use include workflows, tutorials, labs, tips/tool sheets and knowledge boxes. I am skilled with in-person, streamed/remote (MS Teams or Zoom), screen-recorded teaching, and creating text/graphic artifacts like files and web portals. I use learning theories including Blooms, and consider multiple different learner styles. Evaluation metrics like rubrics, skill evaluations, and directed discussions can be used.

A voluminous collection of skills-demonstrations as screen-recordings that directly demonstrate technical skills, are always delivered with coding-demos like those linked (blue text) below.

Skills Focus

University Faculty, Computer Science

End-to-end course development and undergraduate instruction in programming, web development, and full-stack classes online and in-person. For five years.

Joliet Junior College, Joliet, 7-years

University of St. Francis, Joliet, 2-years

North Central College of Engineering, Naperville, 2-years

Technical Course Library (Partial):

Productivity: Microsoft Office, Google Suite, Libra

Frontend: HTML, CSS, JavaScript, Bootstrap, jQuery

Backend: Python, Node.js, PHP, Java, C, C++, C#

Data Store: Atlas/MongoDB, JSON, MariaDB/MySQL, MS-SQL Server, SQLite

Virtualization: VirtualBox, VMWare Workstation

Team Learning Spotlight

From 2018 to 2021 as a visiting scientist to the USGS (United States Geological Survey) I oversaw the long-term skills development of individuals engaging in a variety of scientific research projects. This capacity required multiple styles of learning (lab, field, theory, skills, stem) in structured and non-structured contexts.

In this role, I provided technical support to students using a diverse range of tools including R, C++, Java, Python, SciPy, Numpy, Pandas, and in creating web interface and deploying IoT/micro-sensory data collection devices.
